PROFESSIONAL EXPERIENCE

- **Full Stack Developer**
SALESCOVERS | Part-time | 2021

SalesCovers is a service that helps authors and writers increase their sales through their professional book cover design service. As a Full Stack Developer, my core activities include:
 - Translating Figma UI/UX design into code while producing high quality, reusable components using React and Typescript
 - Improving site performance by implementing Next.js core features (incremental site generating and server side rendering)
 - Building a minimal json cms for easily update website content
 - Integrating paypal for payments & implementing the checkout process
 - Implementing Mailjet API to handle transactional emails (contact form - order confirmation - etc)
 - Using Airtable api as a database to store orders
- **React Developer**
BLUEBOXONLINE | Freelance | 2020

Bluebox is a cloud software company that help startups and businesses grow through its Business Systems. As a React Developer, I've collaborated with the backend team to build an internal embedded React document editor called Libertyddd, my core activities include:
 - Delivering responsive, cross-browser compatible and accessibility app, by translating UI/UX wireframes into high quality, reusable components using React, Styled-components and Redux
 - Expanding features, refining code, and improving processes, producing smoother operations and enhancing user experience
 - Identifying and fixing bugs and technical issues
- **Front End Developer**
STAINLESS MEDIA | Freelance | 2020

Built full features pollinators application. Collaborated with UI design and Backend Developer to produce responsive, cross browser, interactive application, As a Frontend Developer, my core activities include:
 - Translating UI/UX design wireframes into dynamic and browser compatible pages using HTML5, CSS3, jQuery, and Javascript.
 - Recommending solutions for a streamlined user-friendly interface with the UX/UI designer
 - Get client feedback and suggestions, Fix technical issues and add new features

OPEN SOURCE PROJECTS

Qat

CLI tool that helps developers automate workflow tasks using custom CLI commands without reinventing another CLI tool, “Qat stands for Quickly Automate Tasks”

Environment : Node.js - npm

Roomz

Modern, real-time and well-structured chat room back-end API with Implementation of advanced functionalities: authentication - authorization - database management and real-time connections

Environment : Node.js - Express - MongoDB - GraphQL - Apollo - JWT

Weathi

Beautiful look single page weather application, using Google maps and OpenWeather APIs

Environment : React - React Context - Styled components

Earfun

Full features headphones single page online store application with implementation of cart & checkout process + dark mode support

Environment : React - Redux - Styled components
